

Mobile Device Management (MDM)

Remotely manage, support, track, monitor, & secure your mobile devices

Peak-Ryzex MDM

Managing mobile devices across multiple locations and end users requires careful attention. With an effective MDM solution, your mobile devices work well together. Service calls and business risk can be reduced. However, your MDM solution is only one piece of the puzzle. It can only function at an optimal level when managed efficiently on a daily basis. In order to maximize the potential, it requires a dedicated team of professionals with extensive knowledge of MDM best practices.

The MDM services enable our Peak-Ryzex Managed Services team to remotely manage, support, track, monitor, and secure your mobile devices

- **Manage** – Provision, configure, and control mobile devices
- **Support** – Efficient remote control and helpdesk tools for real-time support
- **Track** – Locate and track devices anywhere in the world real-time or historically
- **Monitor** – Proactive alerts and audit reports on device status for policy compliance
- **Secure** – Encrypt data, authenticate corporate access, restrict features, and lockdown devices
- **IT Policy Enforcement** – Ensure all systems meet Corporate standards and requirements

Leveraging more than a decade of MDM experience, our team helps you determine the right MDM solution based on your requirements. We begin with a comprehensive scoping process where we understand current and future requirements and then make recommendations based on your desired outcome and available resources.

MDM installation and configuration

Once we understand your requirements, we can assist in the install of your MDM solution to a server of your choosing (provided the server meets specified requirements). The server can be on your premises or hosted in the cloud. We then configure your solution based on the agreed outcomes from the preliminary scoping process. From here, we can turn it over to your team or we can play a more extensive role and alleviate any strain on your internal teams.

Business Benefits

- Reduce business risk by securing critical data through encryption, authentication, and device lockdowns
- Eliminate costly downtime of IT staff traveling to various sites to address mobile device issues
- Drive consistent adherence to all corporate standards, policies and requirements
- Track and locate devices to ensure optimum asset management and security

MDM Training

Like most solutions, MDM is rarely used to its full potential. Our managed services team helps you to get the most from your solution by conducting training based on your specific audience. You determine if the training will be for administrators who oversee the installation, or for operators who will interface with the MDM solution on a daily basis. There are several training options and we can assist vendor training or facilitate additional training venues.

MDM Server Support

Going beyond training, our team offers server support to your MDM administrators. We monitor the MDM environment and manage all of the MDM-related information on your server. By outsourcing this task, our team will notify you of any server-related issues that may impact the performance of your solution and manage necessary server updates on your behalf.

MDM Deployment Services

Our managed services team can further alleviate the strain on your IT department by managing individual devices direct from our facilities.

Device Provisioning & Deployment

- Stages the mobile device, installs all application software, configures the device to your requirements, activates wireless carrier voice/data plans, installs your custom start-up screen and performs tests to ensure the device is ready to go right out of the box.

Managed Services Help Desk

- First or second-tier technical support for mobile devices. Should a device become inoperable in the field, we can reboot the device, reload the software and even reset the whole operating system without the device leaving the operator's hands.

MDM Managed Services

- Eliminate the time consuming burden on your internal IT staff of managing and maintaining your existing MDM environment by outsourcing this function to Peak-Ryzex's Managed Services team.

Security

- Compliance-based security policies, including lost/stolen lockdown or wipe, encryption key rotation and role-based access rights management.

Reporting

- Accurate database of your mobile assets with information on serial numbers, IP addresses, MAC addresses, geographic location, repair history, plus we offer custom reporting.

Update

- OEM firmware and application updates can be distributed over-the-air to devices without returning the device to the OEM or IT department. Updates can be performed during the day, in-between shifts or overnight. Peak-Ryzex supports many leading MDM vendors including:
